

First, I have to say something.

I think you're onto something genuinely premium.

This doesn't look like another AI startup anymore. It already feels closer to **Apple, Linear, Arc Browser, and Notion** than to Product Hunt or G2.

But...

I think we're only at **75%** of what AGNUS can become.

There are a few things that I think would elevate it from "beautiful" to **iconic**.

1. The Marketplace page (9.5/10)

The top section is almost exactly how I imagined it.

The navigation chips...

The breathing space...

The typography...

The filters...

The search...

Excellent.

I honestly wouldn't change much there.

2. The product cards

This is where I think we're missing emotion.

Right now they feel like...

Beautiful ecommerce cards.

I want them to feel like...

Tiny magazine covers.

Instead of

□□□□□□□□□□□□□□□□

(image)

Claude

Reasoning

View

I imagine

□□□□□□□□□□□□□□□□

beautiful dashboard preview

soft lighting

glass

workspace

↓

Claude

"The best AI for deep reasoning."

9.6

2 min overview

View

Notice...

The image tells a story.

Not simply "here's a product."

3. The dark section

This is actually the thing I would redesign.

Not because it isn't beautiful.

Because...

I think we're mixing two different ideas.

The dark block feels like:

A product.

But I actually imagine it as:

A Mission

Imagine opening

AI for Dental Clinics

I don't want a dashboard.

I want an experience.

Maybe...

Large cinematic photography.

A luxurious dental clinic.

Morning light.

Elegant.

Minimal.

Then floating cards.

Like Apple Vision Pro.

Dental Clinic

Increase productivity

+ €2,800

↓

Appointment AI

Voice Receptionist

Patient Reminder

Review System

Course

ROI Calculator

Deploy

The products are no longer inside a table.

They're floating modules.

The user almost feels like

"I am assembling my clinic."

4. Collections should feel alive

Instead of...

Static boxes.

I think each collection should breathe.

Imagine

Hover.

The Voice Receptionist lights up.

Then

Appointment AI connects.

Tiny animated lines.

Nothing flashy.

Just...

alive.

5. The biggest thing missing

This is actually what I noticed immediately.

Everything is rectangular.

Everything.

Cards.

Sections.

Lists.

Rows.

Imagine if AGNUS introduced

depth.

Not more shadows.

Depth.

For example...

When hovering...

One card moves

3px

Another

2px

Background

1px

Image

zooms

2%

Typography stays still.

Now the page feels layered.

Premium.

6. Images

This is where I think we can completely differentiate AGNUS.

Don't use screenshots only.

Mix

real product UI

-

editorial photography

-

3D objects

For example

Claude

Background

beautiful office

glass desk

MacBook

coffee

warm light

Floating

Claude interface

It feels

human.

7. The black collection

Personally...

I wouldn't actually use

pure black.

I'd use

deep graphite.

Like

Apple's Space Black.

Then

a little texture.

Almost invisible.

Paper.

Stone.

Metal.

Something.

Otherwise

large black rectangles can feel visually heavy.

8. I would make Collections the hero

This is probably the biggest thing.

Right now

Marketplace

↓

Products

↓

Collections

I would invert it.

Marketplace

↓

Collections

↓

Products

Why?

Because

people don't wake up saying

"I need software."

They wake up saying

"I own a dental clinic."

"I own a law firm."

"I run a hotel."

"I'm a YouTuber."

"I'm an architect."

Collections solve identities.

Products solve tasks.
That's a huge psychological difference.

Imagine the first thing you see

Everything

changes.

Marketplace.

Articles.

Courses.

Agents.

Reviews.

Comparisons.

Prompts.

Templates.

Everything reorganizes around

Healthcare.

That's magical.

My favorite idea

This came to me while looking at your design.

I would create something called

AGNUS Collections

Not bundles.

Collections.

Think of them as **digital operating systems for an industry**.

For example:

AGNUS Collection

Dental Clinics

↓

9 AI Products

4 Automations

2 Agents

18 Prompt Packs

1 Course

Case Studies

ROI Calculator

Implementation Roadmap

Community

When someone buys it, they don't feel like they've bought software.

They feel like they've acquired **the complete AI transformation blueprint for their business.**

My overall rating

Honestly?

9.7/10.

Not because it isn't beautiful.

Because I think you're building something that deserves to become **timeless**.

The remaining 0.3 isn't about prettier UI—it's about giving the interface a stronger sense of **story, movement, and identity**.

When someone enters AGNUS, I want every section to answer a silent question:

"What world do I want to enter today?"

Right now, you've built an excellent marketplace.

I think the next evolution is to make it feel like **a collection of worlds**, where each industry, each learning path, and each AI solution has its own atmosphere while still belonging to the same elegant AGNUS universe. That, to me, is what turns a beautiful interface into a memorable product.

I looked at both mockups carefully, and I think they're **far beyond a typical UI concept**. They already communicate "premium." The challenge now isn't making them prettier—it's making them **feel alive**.

Here's what I would refine.

Overall Direction

I think AGNUS should have **two personalities**.

1. The Light World

This is where people:

- Explore
- Read
- Learn
- Compare
- Discover

The light world should feel like:

Walking into a beautiful Scandinavian library.

Large white space.

Warm paper colors.

Elegant typography.

Silence.

2. The Dark World

The dark section shouldn't just be another section.

It should feel like:

Entering the Operations Center.

Not dark because it looks cool.

Dark because now we're moving from **learning** to **implementation**.

That psychological transition is incredibly powerful.

The dark section

This is the biggest thing I would change.

Right now it feels like:

A premium dashboard.

I want it to feel like:

A mission briefing.

Imagine...

Instead of one big rectangle...

You arrive here.

AI Collection

Healthcare

The background is almost cinematic.

Very subtle.

Maybe...

A luxury dental clinic.

Blurred.

Almost invisible.

Only 8% opacity.

You don't consciously notice it.

But your brain feels the atmosphere.

Then floating above it...

Glass panels.

Not tables.

Glass.

Like Apple Vision Pro.

Imagine...

Voice Receptionist

↓

Connected

Appointment AI

↓

Connected

Reminder Automation

↓

Connected

Review System

Connected

ROI

Now it feels like

"I'm assembling my AI business."

Instead of

"I'm reading specifications."

Huge difference psychologically.

The flow

I think Collections should become journeys.

For example...

You're a dentist.

You click:

Dental Clinics.

The page transforms.

Not reloads.

Transforms.

The hero slowly changes.

The colors shift slightly.

The photography changes.

The recommendations change.

Everything becomes

Healthcare.

It almost feels like you've entered another room.

Industry identity

Each industry should have its own visual language.

Healthcare

Soft blue.

White.

Glass.

Clinical.

Law

Dark walnut.

Leather.

Stone.

Elegant.

Architecture

Concrete.

Steel.

Minimalism.

Restaurants

Warm light.

Wood.

Food photography.

Human.

Finance

Glass skyscrapers.

Graphite.

Gold.

Very executive.

The AGNUS system stays identical.

Only the atmosphere changes.

Cards

This is where I think we can do something nobody else is doing.

Imagine the image.

Instead of occupying

30%

of the card.

It occupies

100%.

Behind everything.

Like magazine covers.

The content floats above.

For example

Claude

Background

Beautiful workspace.

MacBook.

Coffee.

Window.

Morning light.

Claude interface floating.

Minimal.

Beautiful.

Now the product already has emotion before anyone reads.

Collections

I actually think Collections deserve a different layout than products.

Instead of rectangles...

Imagine architectural tiles.

□□□□□□□□

Healthcare

9 Products

↓

12 Automations

↓

Course

↓

Case Studies

↓

ROI

□□□□□□□□

The entire tile feels like entering another building.

Motion

This is where AGNUS becomes unforgettable.

Nothing should move quickly.

Everything should feel

heavy.

Confident.

Like luxury.

Hover.

200 milliseconds.

Card lifts.

Background shifts.

Image slowly zooms.

Glass reflects.

Tiny particles move.

Nothing flashy.

Sound

I know this sounds strange.

But eventually...

I would even add optional sound.

Tiny.

Like Kindle.

Tiny click.

Tiny paper sound.

Tiny glass sound.

Everything optional.

Marketplace

Instead of saying

Featured This Week

I would almost create seasons.

For example

Summer Collection

Enterprise Collection

Healthcare Collection

Open Source Collection

Creator Collection

Startup Collection

The Marketplace feels curated.

Not algorithmic.

One idea I absolutely love

This came to me while studying your screenshots.

Imagine every Collection opens with a **Blueprint**.

Not products.

A blueprint.

Example:

AI Transformation Blueprint

Dental Clinic

Patient Booking

AI Reception

Automation

Reviews

Analytics

Marketing

As the user adds solutions from the Marketplace, the blueprint fills in.

They can literally watch their business becoming more AI-enabled.

This is the feature I think could define AGNUS

I wouldn't think of the Marketplace as a store.

I would think of it as a **Transformation Studio**.

A dentist doesn't visit AGNUS to buy "Voice Receptionist AI."

They visit to answer a much bigger question:

"How do I build the AI-powered dental clinic of the future?"

The interface should reflect that ambition. Every interaction should feel like assembling a complete system rather than shopping for individual products.

That's the shift I would make. Your current design is already beautiful. The next step is to make every page tell a story: not just *what* tools exist, but *how they fit together* to solve a real-world problem. That's what will make AGNUS feel unlike any marketplace people have used before.

give the a color codes for all

If AGNUS is going to become a **timeless premium brand**, I would define a strict design system with no more than **12 core colors**. Everything else is generated from these.

AGNUS Design System v1.0

1. Primary Background

Main website background.

Ivory White

#F8F7F4

This replaces pure white.

2. Secondary Background

Industry Themes

Instead of changing the entire UI, I'd add **subtle accent colors** for each industry while keeping the core AGNUS palette intact.

Industry	Accent
Healthcare	#5F8FA8 (Muted Medical Blue)
Law	#6B5A44 (Walnut Brown)
Finance	#4E5F52 (Executive Green)
Architecture	#7A7F83 (Concrete Gray)
Restaurants	#9A6A52 (Terracotta)
Education	#6A79A8 (Academic Blue)
Construction	#7D6A55 (Stone Brown)
Marketing	#8A5FA8 (Muted Violet)
Retail	#A86D4A (Copper)
Manufacturing	#66717C (Industrial Steel)

These colors should appear only in small details—icons, progress indicators, chips, or section accents—so the platform always feels unmistakably **AGNUS**, regardless of the industry being explored.

This palette gives you a design language that is elegant, restrained, and consistent enough to scale across the Marketplace, Intelligence, Reviews, Compare, Academy, Business, and future AGNUS products.
