

What is the purpose of the Content Archive?

This page is **not** a list of published articles.

It is AGNUS's **long-term memory**.

Every published article becomes a living asset.

The archive continuously monitors whether that asset is still valuable.

Where does it get its data?

This is extremely important.

The Archive **does not generate data itself**.

It aggregates data from the rest of AGNUS.

Human Review

↓

Publishing Calendar

↓

Article Published

↓

Content Archive

Then it continuously connects to:

Knowledge Sources

→ pricing changed?

→ official docs changed?

→ API changed?

→ company announcements?

Keyword Discovery

→ keyword losing traffic?

→ new keyword opportunity?

→ search intent changed?

Topic Clusters

→ cluster stronger?

- cluster weakened?
- missing internal links?

Knowledge Graph

- entities changed?
- new related entities?

Performance Module

- traffic
- impressions
- CTR
- rankings
- conversions
- revenue

Affiliate Module

- affiliate programs removed?
- commissions changed?

Research Panel

- source trust changed?
- evidence outdated?

AGNUS Brain

- should article be refreshed?
- merge?
- split?
- rewrite?

The archive is therefore a **live system**, not a storage table.

What is missing?

A lot of intelligence.

1. Archive Health

CLAUDE DESIGN GUIDELINES

Vision

Do not design a table of articles.

Design the **Living Knowledge Library**.

Every row should represent an asset that AGNUS actively monitors.

Page Layout

For Claude Design

Vision

Content Archive is not a storage table.

It is AGNUS's **Living Knowledge Library**.

It should answer:

“What have we published, what is still valuable, what is outdated, what is earning, and what needs action?”

Keep

Keep the clean table style and filters.

But upgrade the archive from a simple list into an active monitoring dashboard.

Add top archive health panel

Archive Health

214 articles

187 healthy

18 need refresh

6 critical

3 archived

Traffic: 182K/mo

Revenue: €6,200/mo

AI visibility: 94%

Improve table columns

Use these columns:

Title
Type
Cluster
Status
Health
Freshness
Traffic
Revenue
AI Visibility
Last Review
Next Review
Actions

Article statuses

Live
Needs Update
Declining
Growing
Critical
Archived
Merge Candidate
Rewrite Suggested

Clicking an article opens a drawer

Drawer sections:

Article Summary
Performance
Knowledge Status
Entity Relationships
Cluster Position
Source Changes
AI Recommendation
Timeline
Actions

Drawer should show why action is needed

Example:

ChatGPT Review

Status: Needs Update

Why:

OpenAI pricing page changed

Search position dropped from #4 to #8

Two comparison pages cite old pricing

Recommended action:

Refresh pricing section

Expected impact:

Recover ~180 visits/mo

Protect €160/mo

Actions

Each row and drawer should support:

Open

Refresh

Rewrite

Update sources

Recalculate scores

Merge

Split

Compare

Archive

Duplicate

View history

Filters

All

News

Reviews

Comparisons

Guides

Academy

Marketplace

Needs Update

High Traffic

High Revenue
Declining

Final design rule

Every archived article should feel like a living asset, not a finished document.

The page must show:

“This content is still being watched.”
