

I actually think the **Marketplace** should become one of the biggest pillars of AGNUS.

Not on day one, but definitely in Phase 2.

The important thing is that **it should not be an Amazon-style marketplace.**

It should be a **curated intelligence marketplace.**

AGNUS Marketplace

The tagline could be:

Everything you need to work with AI. Curated. Tested. Trusted.

The Marketplace is where users stop reading and start taking action.

What would people find there?

AI Software

Instead of searching the internet...

They come to AGNUS.

Example:

- ChatGPT
- Claude
- Gemini
- Cursor
- Windsurf
- Midjourney
- ElevenLabs
- Runway
- Notion AI

Every product has:

- Review
- Comparison
- Video

- Screenshots
 - AGNUS Rating
 - Affiliate Link
 - Alternatives
-

AI Agents

This becomes huge.

Imagine:

Customer Support Agent

Sales Agent

HR Agent

Research Agent

Finance Agent

Legal Agent

Marketing Agent

Developer Agent

Each one can be filtered by:

- Industry
 - Company Size
 - Price
 - Cloud or Local
 - Open Source
 - Enterprise Ready
-

Prompt Marketplace

This is something I think will become very popular.

Not random prompts.

Professional prompt packs.

For example:

Lawyer Pack

500 prompts.

Marketing Pack.

Architecture Pack.

Construction.

Healthcare.

Teachers.

Restaurants.

Churches.

Developers.

Some are free.

Some are paid.

Some are yours.

Some come from creators.

Templates

Business templates.

SOPs.

AI workflows.

Automation blueprints.

Meeting templates.

Proposal templates.

Business plans.

Checklists.

Again:

Free and Premium.

Automations

Ready-made automations.

For example:

Gmail → Notion

Sales CRM

Invoice automation

Lead qualification

Customer onboarding

Users can buy them and import them into their own systems.

AI Workflows

Imagine visual workflows.

Lead comes in.

↓

AI qualifies.

↓

CRM updated.

↓

Meeting booked.

↓

Email generated.

Invoice sent.

People purchase complete business workflows instead of building them from scratch.

Courses

The Marketplace also includes the Academy.

Someone searching for:

Prompt Engineering

Finds:

Course

Books

Prompt Pack

Templates

AI Tools

Everything together.

AGNUS Collections

This is where it becomes beautiful.

Instead of selling products one by one...

Sell complete collections.

Example:

AI for Lawyers

Includes:

Top AI Software

Prompt Pack

Contract Templates

Research Agent

Academy Course

Business Guide

ROI Calculator

Everything in one bundle.

Verified Badge

Not everything enters the Marketplace.

Everything is reviewed.

Imagine:

 AGNUS Verified

Only products meeting your quality standards receive this badge.

That badge itself becomes valuable.

Companies will want to earn it.

Creator Marketplace

Eventually...

Experts create content.

For example:

A lawyer creates:

100 Legal Prompts.

He sells them.

AGNUS keeps a commission.

The same for:

Architects.

Doctors.

Teachers.

Developers.

Consultants.

Now AGNUS becomes a platform, not just a publisher.

Company Marketplace

AI companies can have their own profile.

Imagine:

OpenAI

Products

Courses

Articles

Case Studies

Videos

Awards

Reviews

Everything connected.

Like a verified company page.

Marketplace Navigation

I imagine it looking like this:

Marketplace

- AI Software
 - AI Agents
 - Prompt Packs
 - Templates
 - Automations
 - Workflows
 - Courses
 - Books
 - APIs
 - Enterprise Solutions
 - Creator Store
 - AGNUS Verified
-

The feature I think could become iconic

Most marketplaces organize products.

AGNUS should organize solutions.

Imagine someone says:

"I own a dental clinic."

Instead of seeing 200 AI tools...

The Marketplace shows:

AI for Dental Clinics

Inside:

- Best appointment AI
- Voice receptionist
- Review management
- Patient reminder automation
- Marketing prompts
- Business course
- Case studies
- ROI calculator
- Implementation guide

Everything needed to solve that one business problem is together.

That's what makes AGNUS different. People won't come looking for "software." They'll come looking for **solutions**, and the Marketplace becomes the place where learning, evaluation, and implementation all meet. I think that's a much stronger long-term position than simply listing products with affiliate links.

And how do you view the aesthetic of that section? How does it function? What is the flow? What is the interaction? Is it chords? How does it look like? What are the design? What are the effect? Bring every details, every small details to the millimeter.

Yes — the Marketplace should feel like **a luxury app store for AI solutions**, not a normal product grid.

AGNUS Marketplace aesthetic

The feeling:

Apple App Store × Bloomberg Terminal × premium consulting catalog

Clean, calm, intelligent, profitable.

Page structure

1. Top hero

Marketplace

Curated AI tools, agents, prompts, templates, and workflows for the future of work.

[Search solutions...] [AI Software] [Agents] [Prompts] [Workflows] [Templates]

The search bar is central. It should say:

“What do you want to automate?”

Examples:

- “customer support”
- “restaurant marketing”
- “legal research”
- “YouTube video workflow”

2. Main cards

Yes, it should be **cards**, but premium cards.

Each card should look like this:

soft image / product preview	
AGNUS VERIFIED	
Customer Support Agent	
For Shopify stores	
9.4 AGNUS Score	
€39/mo · 12 min setup	
[View] [Compare]	

Card details, very precise

Use:

- Card radius: **22–28px**
- Border: **1px warm gray**
- Background: **ivory / off-white**
- Shadow: very soft, almost invisible
- Padding: **24–32px**
- Gap between cards: **24px**
- Image height: **140–180px**
- Text area: calm and spacious
- Button height: **42–48px**
- Badge height: **24px**
- No loud colors

Image style

Each product card should have a **soft embedded visual**:

- AI agent → elegant command center
- prompt pack → premium document stack
- workflow → connected nodes
- template → clean business document
- course → academy scene
- software → dashboard preview

The image should be faded with a warm overlay, not bright.

Marketplace sections

Use horizontal premium shelves:

Featured this week
AGNUS Verified
Best for Business Owners
New AI Agents
Prompt Packs
Ready-made Workflows
Templates for Companies
Free Tools
Premium Collections

Like Netflix, but cleaner and more serious.

Interaction flow

User arrives → searches problem → chooses category → filters → opens solution page → compares → buys/joins/downloads.

Filters should be beautiful chips:

All · Software · Agents · Prompts · Templates · Workflows · Free · Premium · Verified

Advanced filters:

Industry: Law, Healthcare, Restaurants, Construction

Price: Free, €1–€50, €50–€200, Enterprise

Skill level: Beginner, Professional, Developer

Setup time: 5 min, 30 min, 1 hour, Advanced

Hover effects

Very subtle:

- Card lifts **4px**
- Shadow becomes slightly deeper
- Image zooms **1.03x**
- Gold border appears softly
- Button fades in stronger

No shaking. No neon. No gaming effects.

Click behavior

When you click a card, open a **solution page**, not just a product page.

Example:

Customer Support Agent

At the top:

- product visual
- AGNUS score
- price
- setup time
- best for
- verified badge
- primary button: **Deploy / Visit / Get Template**
- secondary button: **Compare**

Then:

- What it solves
- Who it is for
- Screenshots
- Demo video
- Setup steps
- Integrations
- ROI estimate
- Reviews
- Alternatives
- Related course
- Related prompt pack
- Related business guide

The unique AGNUS feature

Every marketplace item should connect to the full ecosystem.

A “Customer Support Agent” page should show:

Related review: Best AI Customer Support Agents

Related course: Build an AI Support Workflow

Related template: Customer Support SOP

Related article: Why AI Agents Are Changing Ecommerce

Related comparison: Intercom vs Zendesk AI vs Custom Agent

That is what makes AGNUS more powerful than a normal marketplace.

Final feeling

The Marketplace should make people feel:

“I don’t need to search the internet anymore. AGNUS has already selected the best options for me.”
