

Absolutely. Below is the specification I would freeze and hand to both teams.

CLAUDE DESIGN SPECIFICATION

Section: Human Review (Editorial Governance Center)

Philosophy

Do not design this page as a checklist.

Design it as the final control room before publication.

The editor should immediately understand:

- Is this article ready?
- What is still wrong?
- Why is it wrong?
- What is the expected impact?
- What happens if I publish now?

Everything should communicate confidence and evidence.

The page should feel like an aircraft pre-flight inspection or GitHub Pull Request before merge.

Design Principles

Everything should explain itself.

Nothing should require documentation.

No meaningless percentages.

Every number should answer

"What does this mean?"

Avoid clutter.

Enterprise software.

Not consumer software.
