

I don't want us to keep redesigning the same screens forever. AGNUS has reached the point where we should **lock modules** and move forward.

After reviewing these four screens, this is my decision.

1. Dashboard

Decision

LOCK IT.

I would not redesign it.

It communicates exactly what the CEO needs to know in under 20 seconds.

It answers:

- What happened?
- What needs my approval?
- What is making money?
- What is at risk?
- What should I do next?

That is exactly what a command center should do.

Rating

9.8 / 10

Tiny improvement only.

Instead of

Good morning Jean-Daniel

I'd eventually allow:

Morning

Afternoon

Evening

based on local time.

Nothing else.

2. Dashboard Recommendation Cards

LOCK.

These are now very good.

I especially like

- Approve
- Delegate
- Ignore

Those are executive actions.

Do not replace them.

Only one improvement.

When clicking Approve...

Instead of immediately executing...

Open a confirmation drawer.

Example

Approve recommendation

Expected outcome

+€120/month

Estimated time

2.5 hours

Affected

3 articles

2 comparisons

1 lesson

Approve

Cancel

Very enterprise.

Otherwise lock it.

3. Today's Priorities

LOCK.

Exactly the right amount of information.

No redesign.

4. AGNUS Brain Landing Page

LOCK.

This is actually becoming one of my favourite pages.

The sentence

The Brain never invents.

is brilliant.

Keep it.

Tiny improvement.

The Ask the Brain section is too passive.

I'd rename

Ask the Brain

to

Executive Advisor

or

Strategic Advisor

because it sounds like a business executive rather than a chatbot.

5. Strategic Roadmap

Almost perfect.

Rating

9.9/10

Only one thing missing.

When I press

Start

I don't want AGNUS to immediately start.

I want to see the execution plan.

Example

Publish Best AI Agents

Estimated time

2h 30m

Creates

1 review

2 comparisons

3 guides

Uses

12 verified sources

Expected revenue

€120/month

Proceed

Cancel

That is the last thing missing.

6. Confidence

This is very important.

Right now it says

94%

Instead of only

94%

I'd display

94%

Based on

18 verified sources

7 trend signals

91% consensus

The confidence score becomes explainable.

7. Probability of Success

I LOVE this addition.

Keep it.

Do not remove it.

8. Evidence Chips

Excellent.

Don't redesign them.

9. Sidebar

LOCK.

Finally.

It has enough modules.

Adding more now will only make navigation harder.

10. Chief Editor

Keep exactly where it is.

That floating assistant is becoming part of the AGNUS identity.

Overall Product Direction

This is the important part.

We stop redesigning.

From now on our philosophy changes.

Before:

Design module

Redesign

Redesign

Redesign

Now:

Design

↓

Lock

↓

Build functionality

↓

Next module

That is how enterprise products are built.

Final verdict for Claude Design

Dashboard: LOCK.

Recommendation Cards: LOCK. Add a confirmation drawer before execution.

Today's Priorities: LOCK.

AGNUS Brain Landing: LOCK. Rename "Ask the Brain" to "Strategic Advisor" or "Executive Advisor."

Strategic Roadmap: LOCK. Add an execution preview before starting.

Confidence: Keep the score but show why AGNUS is confident (sources, signals, consensus).

Sidebar: LOCK.

Chief Editor: LOCK.

My recommendation going forward

I don't want Claude spending time polishing pixels on these screens anymore.

I want the effort to shift toward making AGNUS *smarter*.

The highest-value work now is building the intelligence behind the UI:

- richer knowledge graph propagation,
- stronger recommendation reasoning,
- entity relationships,
- source orchestration,
- workflow automation,
- business-specific AGNUS templates (legal, healthcare, finance, manufacturing, education, etc.).

Those capabilities will create far more value than further visual refinements. The UI is now mature enough to support that next phase.
