

Below is the fixed guidance.

For Claude Design

Goal: Keyword Discovery must feel alive. It should not look like a manual keyword list.

Keep the current page structure, but add a “Discovery Engine” status block at the top.

Place it above the opportunity score panel.

Discovery Engine

Last scan: 8 min ago

Sources scanned: 53

New keywords found: 128

Qualified opportunities: 21

High opportunity: 4

Duplicates removed: 17

[Run scan now] [Add keyword manually]

Add two modes

Autonomous Discovery

Manual Keyword

Default must be **Autonomous Discovery**.

Manual keyword is only for when the editor wants to force AGNUS to analyze a specific keyword.

Keyword cards should show source evidence

Each keyword card should include:

Keyword

Opportunity score

Intent

Traffic

Difficulty

Affiliate value

Cluster

Source evidence

Recommended action

Example:

best AI tools for restaurants

Score: 8.7

Intent: Commercial

Traffic: Medium

Difficulty: Low

Affiliate: High

Cluster: Business / Restaurants

Evidence:

Google Trends rising

Search Console impressions

Low competition

Affiliate match

Cluster gap

[Write] [Research] [Add to cluster]

Add a keyword detail drawer

When clicking a keyword, open a right-side drawer with:

Keyword Overview

Search Demand

Trend History

Search Intent

Competition

Business Value

Affiliate Value

Cluster Fit

Semantic Expansion

Voice Search Questions

AI Search Opportunities

Related Keywords

Competitor Pages

Internal Content Gap

Recommended Article Types

Expected Traffic

Expected Revenue

Recommended Next Action

Final design rule

Keyword Discovery should visually communicate:

“AGNUS found this opportunity for you.”

Not:

“Type keywords here manually.”
