

Absolutely. At this point I would give Claude Design and Codex different responsibilities.

- **Claude Design** = Owns the experience, layout, interactions, information architecture, and UX.
- **Codex** = Owns the backend architecture, data model, services, event flow, APIs, automation, and implementation.

They should never solve the same problem from different angles.

Guidance for Claude Design

Mission

The Knowledge Sources page is no longer a CRUD page.

It is the **Knowledge Control Center** of AGNUS.

Every visual element must answer one of these questions:

- What knowledge do we have?
- Can we trust it?
- Where does it flow?
- What business depends on it?
- What should I do next?

The UI should feel like an operating system managing enterprise intelligence.

Keep

Keep the current architecture.

It is excellent.

Keep:

- Source Groups
- Source List
- Side Configuration Panel
- Trust Scoring
- Automation Rules
- Sync Settings

- Data Coverage
- Health History

Do not redesign these.

Instead, enrich them.

Add Section 1

Knowledge Flow

Add a new visualization directly inside every source.

Example

OpenAI

API

↓

Knowledge Database

↓

Knowledge Graph

↓

Research Panel

↓

Story Builder

↓

AI Writer

↓

Published Articles

↓

Content Archive

This should be clickable.

Add Section 2

Connected Modules

Every source should visually show

Connected To

- ✓ Intelligence Feed
- ✓ Keyword Discovery
- ✓ Research Panel
- ✓ Topic Clusters
- ✓ Story Builder
- ✓ AI Writer
- ✓ Human Review
- ✓ Publishing Calendar
- ✓ Content Archive
- ✓ Entity Manager
- ✓ Knowledge Graph
- ✓ AGNUS Brain

Every module is clickable.

Add Section 3

Business Impact

Example

Business Impact

34 Articles

12 Reviews

6 Comparisons

3 Buying Guides

4 Academy Lessons

€1,240 Protected Revenue

2 Topic Clusters

8 Entities

Everything clickable.

Add Section 4

AI Recommendation

Chief Editor

OpenAI is producing
more pricing updates
than expected.

Recommended

Increase sync

15 min

↓

5 min

Or

Trust should decrease

100

↓

92

Add Section 5

Source Timeline

Today

Pricing updated

↓

Documentation changed

↓

Entity rebuilt

↓

Research notified

↓

Story Builder created brief

↓

AI Writer updated draft

Beautiful timeline.

Add Section 6

Coverage Heatmap

Instead of numbers

Pricing

Models

API

Examples

Community

Very visual.

Add Section 7

Source Dependency

Show

If this source fails

↓

12 Reviews

↓

7 Comparisons

↓

4 Entities

2 Clusters

Revenue Risk

€980/mo

Add Section 8

Run Simulation

Large button

Simulate Source Update

Result

What happens if

Pricing changes

Knowledge Database updates

Graph rebuilt

Research refreshed

Story Builder updated

Human Review notified

No settings.

Just simulation.

Add Section 9

Provenance

Every data item should explain

Origin

↓

OpenAI

↓

Knowledge Source

↓

Database

↓

Entity

↓

Graph

↓

Article

Enterprise transparency.

UX Philosophy

The administrator should never wonder

"What does this source actually do?"

The page should answer that visually.

Guidance for Codex

Mission

Build the Knowledge Source subsystem as the central ingestion engine of AGNUS.

Everything that enters AGNUS begins here.

This is not a settings page.

It is an event-driven orchestration service.

Core Architecture

External Systems

↓

Connector Layer

↓

Knowledge Sources

↓

Sync Engine

↓

Normalizer

↓

Knowledge Database

↓

Entity Extraction

Knowledge Graph

Event Bus

Subscribers

AGNUS Brain

Research

Story Builder

AI Writer

Publishing

Every Source must own

id

name

group

type

priority

trust

status

authentication

sync

coverage

automation

health

usage

metrics

Every Source exposes

connect()

disconnect()

sync()

validate()

normalize()

calculateTrust()

calculateCoverage()

publishEvents()

healthCheck()

simulate()

Event Driven

Never directly update modules.

Everything publishes events.

Example

SourceUpdated

↓

KnowledgeUpdated

↓

EntitiesUpdated

↓

GraphUpdated

↓

ResearchNeedsRefresh

↓

StoryBuilderNeedsUpdate

↓

AIWriterNeedsRefresh

↓

HumanReviewNeeded

Loose coupling.

Data Provenance

Every record

KnowledgeRecord

{

```
source_id
endpoint
retrieved_at
checksum
version
normalized_by
entity_links
graph_links
used_by_articles
last_verified
}
```

Nothing should lose its origin.

Usage Tracking

Every module reports

ModuleUsage

```
{
  module
  article
  entity
  cluster
  timestamp
}
```

Now every source knows exactly
where it is being used.

Business Impact Engine

Produces recommendations

Increase Sync

Lower Trust

Add Endpoint

Missing Documentation

Coverage Weak

Unused Source

Versioning

Every configuration change

SourceVersion

{

version

editor

timestamp

changes

rollback

}

Never overwrite configuration.

Long-Term Vision

Codex should build this subsystem so that, in the future, AGNUS can support:

- 10 sources
- 100 sources
- 1,000 sources
- 10,000 sources

without requiring architectural changes.

Every new connector (OpenAI, Anthropic, Google AI, Reddit, Search Console, YouTube, Partner APIs, internal databases, etc.) should plug into the same ingestion framework and immediately benefit from trust scoring, provenance, automation, health monitoring, impact analysis, and event propagation.

Final note

If the previous modules (Keyword Discovery, Research Panel, Story Builder, AI Writer, Human Review, etc.) are **the brain's cognitive process**, then **Knowledge Sources is the circulatory system**. It is the only place where new knowledge enters AGNUS, and therefore it deserves the richest architecture in the entire platform. Everything downstream should be traceable back to this subsystem.
