

The "Create Article" modal is too simple.

It asks:

- Article type
- Main keyword
- Secondary keywords

This is how WordPress works.

AGNUS should work differently.

Step 1 should become "Opportunity"

Instead of:

Topic

It should be:

Opportunity

At the top:

What do you want AGNUS to build?

Option A

Build from keyword

(Search)

Option B

Build from opportunity

(from AGNUS Brain)

Option C

Build from competitor

Option D

Build from entity

(OpenAI)

Claude

Gemini

etc.

Option E

Build from Topic Cluster

Option F

Build from Research

The first step should not immediately ask for keywords.

Keyword Intelligence Panel

If the user selects

"Build from keyword"

then a new panel opens.

Instead of:

Main keyword

Secondary keywords

we should have a complete keyword intelligence system.

Example:

Search keyword

[_____]

Search

After pressing Search:

Keyword

AI agents for restaurants

Monthly Search Volume

12,400

Trend

↑ Rising

Difficulty

31/100

Commercial Intent

High

Business Value

★★★★★

Voice Search

Excellent

AI Search Visibility

High

Semantic Score

96%

Parent Topic

AI Restaurant Software

Search Intent

Commercial Investigation

...

AGNUS Recommendation

★★★★★

Then:

Use this keyword

Continue →

Where does this data come from?

This is exactly why we designed the backend.

The search comes from:

Search Demand sources

Google Search Console

Google Trends

Keyword providers

SERP APIs

Internal AGNUS history

Knowledge Graph

Competitor analysis

Search intent classifier

Semantic embedding engine

Voice search analyzer

Step 2

Instead of

Strategy

it becomes

Content Strategy

Show:

Audience

Intent

Recommended structure

Competitors

Entities

Sources

Questions

Internal links

Affiliate opportunities

Products

Call-to-action

Schema

Tone

Language

EEAT score

Estimated reading time

Step 3

Publishing

This can remain largely as it is.

One more feature I would add

I think this becomes one of AGNUS's biggest differentiators.

Inside the keyword search:

Keyword:

AI agents for restaurants

There should be an **"Expand Intelligence"** button.

When clicked, AGNUS automatically analyzes:

- Semantic keyword relationships
- Voice search opportunities
- AI Overview likelihood
- Google Discover potential
- Featured snippet opportunities
- Internal linking opportunities
- Existing Topic Cluster coverage
- Competitor coverage gaps
- Monetization potential
- Seasonal trends
- Geographic search opportunities
- Search intent changes over time

Instead of simply saying:

"This keyword has 12,400 searches."

AGNUS should answer:

"This keyword belongs to a growing semantic cluster with high commercial intent, low competition, strong AI Overview potential, and supports six related articles that together could generate an estimated 45,000 monthly impressions."

That is intelligence—not just keyword research.

My recommendation

I would **not** lock the current Create Article modal. I would redesign it now, before development progresses further. It will become one of the core workflows of AGNUS, and getting it right at this stage will save significant redesign work later. The modal should feel like the user is consulting an AI strategist, not filling out a traditional CMS form.
