

The dashboard is strong, but it needs **three clear structures** so the user never feels lost.

1. Menu structure correction

Right now the menu is good, but **AI Writer is too isolated**. Article creation is not only writing. It is a full workflow.

I would restructure the sidebar like this:

ENGINE ROOM

Dashboard

CONTENT OPERATIONS

- Intelligence Feed
- Keyword Discovery
- Research Panel
- Topic Clusters
- Article Pipeline
- Story Builder
- AI Writer
- Human Review
- Publishing Calendar
- Content Archive

OPTIMIZATION

- Internal Linking
- SEO / GEO
- Media
- Performance
- Affiliate

INTELLIGENCE

- AI Council
- Opportunity Center
- Reports

SYSTEM

- Control Center
- Integrations
- AI Models
- Prompts
- Users & Permissions
- Logs

The most important missing item is **Story Builder**.

Story Builder comes before AI Writer because the article should not begin with writing. It should begin with:

topic → keyword → research → angle → outline → draft

So the correct flow is:

Keyword Discovery / Intelligence Feed

Story Builder

Research Panel

AI Writer

Human Review

SEO / GEO

Publishing Calendar

Published

2. Article creation structure

The “Create Article” modal is good, but there is a bug/design issue: the Target Audience, Tone, and Goal are showing code text. Those should be clean selectable chips.

Correct version:

Create Article

Article Type

[News] [Explainer] [Review] [Comparison] [Buying Guide]

[Tutorial] [Business Guide] [Academy Lesson] [Marketplace Page]

Main Keyword

best AI tools for restaurants

Secondary Keywords

restaurant AI, booking AI, voice receptionist

Target Audience

[Beginner] [Professional] [Enterprise]

Tone

[Intelligence] [Practical] [Executive] [Tutorial]

Goal

[Inform] [Rank] [Convert] [Educate] [Sell]

Primary Cluster

Restaurants

Connected Assets

[Marketplace] [Review] [Comparison] [Academy] [Business Guide]

Button:

Generate Research Brief

I would **not** send the user directly into writing. First button should be:

Generate Research Brief

Then after the brief:

Approve Outline → Generate Draft → Open AI Writer

3. AI Writer structure

Your AI Writer layout is very good: left outline, center editor, right AI assistant.

But I would adjust it like this:

LEFT PANEL

Outline

Research Notes

Internal Links

Assets

SEO Checklist

CENTER PANEL

Article Editor

Title

Subtitle

Metadata

Body

Tables

Images

CTA

FAQ

Sources

RIGHT PANEL

Chief Editor AI
Rewrite
Add
Check
SEO
GEO
Affiliate
Marketplace Connections

At the top of the article editor, add a **content status bar**:

Status: Drafting
Quality: 91/100
SEO: 88
GEO: 84
Internal Links: 6/10
Affiliate: 3 opportunities
Cluster: Restaurants
Reading Time: 8 min

Also add tabs above the editor:

Draft | Research | SEO | Media | Links | Publish

This keeps everything inside one workspace.

Key correction

The article should not be created only in **AI Writer**.

The real structure should be:

Article Pipeline = overview of all content
Story Builder = create the article strategy
Research Panel = collect facts and sources
AI Writer = write and edit
Human Review = approve quality
Publishing Calendar = schedule
Performance = measure results

So my recommendation is:

Add “Story Builder” to the sidebar.

That is the missing bridge between idea and writing.

I actually see several opportunities that would make AGNUS go from a **great editorial dashboard** to something that, in my opinion, would be among the best AI publishing systems available.

I'll organize them by priority.

1. COMMAND CENTER (Highest Priority)

This is the one thing I think is missing.

At the top of every page, press:

⌘K

or

Ctrl + K

A command palette opens.

Like:

- Linear
- Raycast
- Arc Browser

Example:

Search...

Create article

Create review

Search keyword

Open Claude review

Open Marketplace

Generate outline

Publish article

Invite editor

Settings

AI Council

You almost never need to navigate menus.

2. KNOWLEDGE GRAPH

I think this becomes the heart of AGNUS.

Every article should have a graph.

Imagine a side panel.

Current Article

↓

Restaurant AI

↓

Connected

Booking AI

Voice AI

Restaurant CRM

POS

Reviews

Reservations

Marketing

Automation

You immediately see:

"What am I missing?"

3. ARTICLE COVERAGE MAP

This would be amazing.

Instead of reading lists...

Imagine a heat map.

Restaurant AI

Complete

Healthcare

Law

Construction

Accounting

You instantly know where AGNUS is weak.

4. CLUSTER HEALTH

Every cluster gets a score.

Restaurant AI

Authority

91%

Internal Links

82%

Reviews

100%

Comparison

75%

Marketplace

94%

Academy

68%

Business

100%

One glance.

5. CONTENT RELATIONSHIP PANEL

This is huge.

Every article automatically shows:

Connected

Review

Claude

Comparison

Claude vs GPT

Marketplace

Claude

Academy

Prompt Engineering

Business

Restaurant AI

Collection

Hospitality

If one is missing...

Show red.

6. READER JOURNEY

This is something nobody is doing.

Every article should have:

Entry

Google

↓

Article

↓

Review

↓

Comparison

↓

Marketplace

↓

Newsletter

↓

Academy

↓

Premium

The dashboard literally predicts the customer journey.

7. ARTICLE VALUE

Instead of SEO Score only.

Imagine:

SEO

91

Authority

95

Affiliate

84

Business

100

Academy

70

Marketplace

96

Newsletter

88

Overall Value

Now you know which articles actually matter.

8. ARTICLE RELATIONSHIP CHECK

Before publishing.

Ask:

Is there

Review?

YES

Comparison?

YES

Academy?

NO

Business Guide?

YES

Marketplace?

YES

Collection?

NO

The system tells you what's missing.

9. AI TEAM

Instead of one AI.

Imagine clicking:

Council

Then:

Chief Editor

SEO Director

Research Director

Business Director

Marketplace Director

Academy Director

Affiliate Director

Each gives one opinion.

Like having executives around a table.

10. CONTENT SCORE

The AI should say:

Weak Introduction

Need better hook

No business impact

Comparison weak

No real examples

Needs timeline

Needs FAQ

Affiliate opportunity missing

Authority score low

Instead of:

"Looks good."

11. COMPETITOR PANEL

Amazing feature.

Imagine:

Competing Articles

Backlinko

92

HubSpot

89

Zapier

95

OpenAI

100

Then

Missing Sections

Pricing

Timeline

Video

FAQ

Case Study

12. ARTICLE TIMELINE

Every article has history.

Created

June 2026

↓

Updated

July

↓

Pricing Updated

August

↓

GPT-6

September

Very useful.

13. LIVE PREVIEW

I think this is essential.

Right now you're editing.

I want one button.

Reader Mode

Click.

You instantly see exactly how the public article looks.

Same typography.

Same spacing.

No surprises.

14. VERSION CONTROL

Like Git.

Draft 1

↓

AI Rewrite

↓

Human Revision

↓

Published

↓

Updated

↓

Archived

Restore any version.

15. CONTENT LIBRARY

Not Media Library.

A reusable library.

Comparison Tables

Case Studies

Charts

Diagrams

Statistics

Quotes

Prompt Blocks

Business Frameworks

Timelines

Drag into any article.

16. COMPANY DATABASE

This excites me a lot.

Every company has one record.

Example:

OpenAI

Products

Models

Pricing

Articles

Reviews

Comparisons

Marketplace

News

Timeline

Affiliate

When OpenAI changes pricing...

Everything updates.

17. PRODUCT DATABASE

Same idea.

Every product has one source of truth.

Claude

Price

API

Features

Pros

Cons

Images

Videos

History

Reviews simply reference this data.

18. PEOPLE DATABASE

Sam Altman.

Dario Amodei.

Demis Hassabis.

Everything connected.

19. MEDIA GENERATOR

One click.

Generate

Hero

Thumbnail

LinkedIn

Instagram

Pinterest

Newsletter

Open Graph

Everything follows AGNUS branding.

20. The feature I think could become your biggest competitive advantage

This is the one I would build before almost anything else.

The AGNUS Brain

Imagine a button in the top-right corner:

"What should we build next?"

You click it.

The AGNUS Brain analyzes:

- Trending topics.
- Existing clusters.
- Missing comparisons.
- Weak industries.
- Marketplace gaps.
- Affiliate opportunities.

- Reader behavior.
- Newsletter performance.
- AI search trends.

Then it doesn't just give you ideas.

It gives you a prioritized roadmap.

For example:

1. Publish "Best AI Accounting Software" because it completes an important business cluster and has strong affiliate potential.
2. Update your Claude review because pricing changed yesterday.
3. Create an Academy lesson on AI receptionists because three popular articles are already sending readers there.
4. Invite two AI companies to the Marketplace because users are searching for them but you don't have listings.
5. Expand the Healthcare collection because it has high engagement but only 40% coverage.

At that point, AGNUS stops being an editorial dashboard.

It becomes a **strategic business operating system** that continuously tells you where the next opportunity lies.

My final recommendation

If I had to choose **only five additions** that would have the biggest long-term impact, I would build these first:

1. **Story Builder** (between Research and AI Writer).
2. **AGNUS Brain** (strategic recommendations).
3. **Knowledge Graph** (connect everything).
4. **Company & Product Database** (single source of truth).
5. **Reader Journey & Relationship Checker** (ensure every piece of content supports the ecosystem).

Those five features reinforce the philosophy we've been developing together: **every article, product, course, comparison, and marketplace item should be part of one connected intelligence system, never isolated content.**
