

Very good. Right now we need to also have a page that shows all the categories. All the categories, all like, you know, a place of selection, because this one that you are giving me just like for one single article also points to other articles, like recommended before this, deep dive, stuff like that. How about the page where the visitor is seeing different kinds of categories, where he can choose, he can select where he wants to dive. This is just like that will be the main one as a matter of fact. How do you see it? What is the visual? How does the user interact with it? Let me know all the details that you want to have.

I think you've just described what becomes the **heart of AGNUS**.

I actually **would not** make this page look like a category page.

I would make it feel like **walking into the Library of Alexandria—rebuilt for AI**.

When people arrive, they shouldn't think:

"Choose a category."

They should think:

"Where do I want to explore today?"

I would call it

Explore

Not Categories.

Not Topics.

Not Browse.

Just one word.

Explore

Because that's exactly what people are doing.

The First Impression

The page opens with almost no clutter.

A large title.

Explore Intelligence

Below it, one sentence.

Discover the world's knowledge about artificial intelligence, organized into connected learning paths.

Below that...

One giant search bar.

Not a normal search.

It says:

What do you want to understand today?

Examples rotate slowly inside it.

AI Agents

Marketing Automation

Cursor AI

Voice AI

Healthcare AI

Prompt Engineering

Then...

The page slowly reveals itself.

Not hundreds of categories.

Beautiful collections.

Imagine Netflix.

But for intelligence.

The Collections

Each collection is almost like opening another world.

Large beautiful cards.

Not tiny icons.

Imagine this...

AI Models

Background

Elegant abstract neural illustration.

Inside

- OpenAI
- Claude
- Gemini
- Llama
- Mistral
- Grok

120 articles

42 reviews

18 comparisons

Business

Beautiful office photography.

Inside

Healthcare

Construction

Finance

Law

Education

Government

Retail

Manufacturing

Learn

Beautiful architectural staircase.

Executive

AI Tools

Large toolbox illustration.

Inside

Writing

Video

Design

Coding

Automation

Voice

Research

CRM

Email

Productivity

AI Agents

Beautiful futuristic office.

Customer Support

Sales

HR

Legal

Finance

Marketing

Developers

Personal Assistant

Market Intelligence

Charts.

Investments.

Funding.

Startups.

Acquisitions.

Product launches.

Already, the page feels less like navigation and more like discovery.

Hover

Now something magical happens.

When the mouse moves over one of these cards...

The card gently expands.

The background slowly comes alive.

Nothing flashy.

Maybe a subtle animation.

The card begins to preview what's inside.

For example...

AI Agents.

Hover.

Now you immediately see:

Trending

Customer Support Agent

New

OpenAI Research Agent

Popular

Sales Automation

Newest

Microsoft Agent Framework

Without clicking.

Click

Now the card expands.

Not to another homepage.

To an intelligence hub.

AI Agents

At the top...

A hero.

Then...

Featured

▼ Business

Healthcare

Construction

Retail

Education

This gives people confidence.

They always know where they are.

The Right Side

Always changing.

Recommendations.

Because AGNUS knows you.

For example...

Continue Reading

You left this article yesterday.

Recommended

Because you studied AI Agents.

Trending

Among business owners.

Saved

Your personal collection.

Now the homepage becomes personal.

Discovery

One thing I really want.

Every page should encourage curiosity.

Imagine reading about GPT-5.

On the side...

Small floating connections.

Instead of "Related Articles."

You see...

Connected Knowledge

Prompt Engineering

Memory Systems

Claude

Vector Databases

Enterprise AI

Cursor

RAG

Voice AI

It feels like Wikipedia.

But beautiful.

Filters

At the top.

Beautiful chips.

No dropdowns.

Everything visible.

The Knowledge Universe

This is where I think AGNUS becomes iconic.

Imagine one button.

Explore Universe

Click it.

The screen transforms.

You now see thousands of floating nodes.

Like galaxies.

Each node is knowledge.

AI Models.

AI Agents.

Companies.

Courses.

Prompt Engineering.

Business.

Automation.

Click one.

The universe zooms into it.

The nodes reorganize.

You're literally traveling through knowledge.

I've never seen this done well for AI education, and it would become a signature experience if executed elegantly rather than as a gimmick.

My favorite idea of everything

And I think this could become the defining feature of AGNUS.

Every single page, whether it's:

- an article,
- a review,
- a comparison,
- an academy lesson,
- an AI agent,
- or a business guide,

belongs to the **same knowledge graph**.

That means nothing is isolated.

A reader who starts with "What is Retrieval-Augmented Generation (RAG)?" can naturally progress to vector databases, compare RAG frameworks, take a hands-on course, evaluate commercial tools, and read enterprise case studies—all without feeling lost.

To me, that's the difference between a website and a true intelligence platform.

If we build AGNUS this way, we're not organizing pages—we're organizing **understanding**. And that's a much stronger foundation because it grows richer every time you publish something new.
