

AGNUS Article Builder — Claude Design Guideline

IKEA-style guided article experience

Core mission

Design AGNUS as an **intelligent article-building experience**, not as a normal editor.

The user must always know:

Where am I?
What am I building?
What do I do next?
Why does it matter?
What is completed?
What is missing?
When am I finished?

AGNUS should guide the user from:

Keyword opportunity

↓

Research

↓

Strategy

↓

Brief

↓

Blueprint

↓

Article creation

↓

Images/assets

↓

E-E-A-T verification

↓

Semantic/voice/AI-search optimization

↓

Human review

↓

Publish

↓

1. IKEA-style workflow

The article builder should use clear guided steps:

- Step 1 — Discover
- Step 2 — Research
- Step 3 — Strategy
- Step 4 — Build Brief
- Step 5 — Blueprint
- Step 6 — Create Article
- Step 7 — Enrich with Assets
- Step 8 — Verify & Optimize
- Step 9 — Preview
- Step 10 — Publish
- Step 11 — Grow

Each step must show:

- Purpose
 - Input
 - Process
 - Output
 - Connected components
 - Manual option
 - AI-assisted option
 - Automatic option
 - Completion status
 - Next action
-

2. Flight Plan

At the top of the article builder, always show:

FLIGHT PLAN

Mission:

Publish “Best AI Tools for Restaurants”

Current step:

Strategy

Overall progress:
41%

Completed:
Research
Keyword discovery

Missing:
Semantic keywords
Voice questions
Images
Schema
E-E-A-T validation

Estimated time:
22 minutes

Next best action:
Review semantic keyword map

[Continue]

This should never feel like random tabs. It should feel like a guided mission.

3. Three completion modes for every field

Every important field must support:

-  Manual
-  AI Assist
-  Auto Fill

Example:

Primary Keyword

[best AI tools for restaurants]

 Auto-filled from Keyword Discovery

Uses:

- ✓ Google Trends
- ✓ Search Console

- ✓ Competitor gaps
- ✓ Semantic search
- ✓ Topic cluster
- ✓ Knowledge Graph

[Accept] [Edit] [Regenerate]

This applies to:

Primary keyword
Secondary keywords
Semantic keywords
Voice questions
Meta title
Meta description
Slug
Unique angle
Article outline
FAQ
Schema
Images
ALT text
Internal links
CTA
E-E-A-T notes

4. Discover step

This step finds the opportunity.

It must include:

Keyword research
Search demand
Trend growth
Search intent
Competitor gaps
People Also Ask
Semantic search
Voice search questions
AI-search opportunities
Topic cluster gaps
Business value
Affiliate value
Expected traffic
Expected revenue

The page should answer:

What should we write?

Why now?

What is the opportunity?

How valuable is it?

5. Research step

This step gathers evidence.

It must show:

Official sources

Competitor sources

Research sources

Community sources

Reviews

Pricing pages

Product pages

Documentation

Contradictions

Source trust

Research completeness

The research step must answer:

What do we know?

Can we prove it?

Which sources are trustworthy?

What is missing?

6. Strategy step

This is where AGNUS decides how the article should win.

It must include:

Target audience

Search intent

Buyer stage

Unique angle

Article type

Business goal

Monetization path
Cluster position
Content gap advantage

Examples of article types:

Guide
Review
Comparison
Buying guide
Tutorial
Business guide
FAQ article
Marketplace article
Academy article
News analysis

7. Keyword intelligence section

This must not be a simple keyword list.

It must include:

Primary keyword
Secondary keywords
Semantic keywords
Entity keywords
Long-tail keywords
Voice-search keywords
Question keywords
People Also Ask
Featured snippet targets
AI-search answer phrases
Local keywords
Commercial keywords
Transactional keywords

Each keyword should show:

Intent
Difficulty
Search demand
Trend
Business value
Cluster fit
Source

8. Semantic search section

Semantic search must become a visible part of the workflow.

Show a semantic map:

Main topic:

AI tools for restaurants

Related semantic concepts:

Restaurant automation

AI booking

Voice receptionist

Menu optimization

POS integration

Review automation

Customer service AI

Inventory prediction

For each semantic concept, show:

Coverage status

Used in outline?

Used in article?

Entity connected?

Internal links available?

Purpose:

Help AGNUS build topical authority, not only keyword matching.

9. Voice search section

Voice search must be included before the article is written.

Show conversational questions:

What is the best AI tool for a restaurant?

Can AI answer phone calls for restaurants?

How can a restaurant automate bookings?

What AI tools help restaurants get more reviews?

Each question should have actions:

- Add to FAQ
- Add as H2
- Use as direct answer
- Add to schema
- Ignore

The voice search section should optimize for:

- natural language
- short direct answers
- FAQ schema
- conversational headings
- mobile search
- assistant-style answers

10. E-E-A-T section

This is essential and must be visible.

Create a dedicated E-E-A-T panel:

E-E-A-T Readiness

Experience:

Does the article show practical experience?

Expertise:

Does it demonstrate subject knowledge?

Authoritativeness:

Does it cite trusted sources and connect to authoritative entities?

Trust:

Are claims verified, sources clear, and affiliate links disclosed?

Each category should show:

Score

What is missing

Recommended fix

AI assist action

Manual edit option

Example:

Trust: 72%

Missing:

Affiliate disclosure

Two unsupported claims

No source for pricing

Actions:

[Add disclosure]

[Find citations]

[Verify pricing]

11. Blueprint step

Blueprint should be more than headings.

Each section in the blueprint must include:

Heading

Purpose

Target keywords

Semantic concepts

Voice questions

Entities

Evidence required

Internal links

Images/assets needed

CTA

Schema notes

E-E-A-T contribution

AI Writer notes

Example:

Section:

Best AI voice tools for restaurants

Purpose:

Help restaurant owners compare voice automation tools.

Keywords:

AI voice receptionist, restaurant phone automation

Voice question:

Can AI answer restaurant phone calls?

Entities:

OpenAI, ElevenLabs, restaurant booking system

Evidence:

Pricing source, product documentation

E-E-A-T:

Add practical business example

Assets:

Comparison table + screenshot

CTA:

Compare tools in marketplace

12. Create Article step

AI Writer must generate from the approved blueprint only.

It must not feel like a blank prompt box.

The editor should show:

Plan

Write

Verify

Finish

And every paragraph should support:

Rewrite

Expand

Shorten

Add citation

Add example

Add table

Add FAQ

Improve SEO

Improve GEO

Improve E-E-A-T

Improve voice-search answer

13. Enrich with Assets step

There must be a clear place to upload and manage images/assets.

Create an **Asset Manager** section.

Supported assets:

- Hero image
- Section images
- Screenshots
- Product images
- Infographics
- Charts
- Tables
- Videos
- PDFs
- Downloads
- Audio
- Logos
- Social images
- OpenGraph image
- Newsletter image

Each asset supports:

- Upload
- Generate with AI
- Browse library
- Replace
- Crop
- Compress
- Upscale
- ALT text
- Caption
- Filename SEO
- License/source
- Version history
- Connected article sections

The system should show asset readiness:

- Hero image: Missing
- ALT text: Complete
- Compression: Complete
- License: Missing
- OpenGraph image: Missing

14. Verify & Optimize step

This is the final optimization before review.

It must include:

- SEO score
- GEO score
- AI-search score
- Voice-search readiness
- E-E-A-T readiness
- Semantic coverage
- Keyword coverage
- Entity coverage
- Evidence score
- Schema readiness
- Internal links
- External links
- Affiliate disclosure
- Readability
- Accessibility
- Media readiness

Every score must be clickable and explainable.

Example:

Semantic coverage: 68%

Missing:

- Restaurant POS
- Inventory automation
- Review automation

Actions:

- [Add semantic section]
- [Insert related paragraph]
- [Add internal links]

15. Preview step

The user must preview the article before publishing.

Preview modes:

Desktop article
Mobile article
Google result
AI-search answer
Voice-search answer
Newsletter
LinkedIn
Facebook
OpenGraph
Marketplace card
Client preview

This is very important. The user must see the final experience.

16. Publish step

Before publishing, show:

Publish readiness
Human review status
SEO complete?
GEO complete?
E-E-A-T complete?
Images complete?
Schema complete?
Internal links complete?
Affiliate disclosure complete?

Actions:

Publish now
Schedule
Send to review
Return to AI Writer
Export
Client preview

17. Grow step

After publishing, AGNUS continues monitoring.

Show:

Traffic
Rankings
CTR
Conversions
Revenue
Affiliate clicks
AI visibility
Voice search visibility
Refresh needs
Content decay
Competitor updates
Keyword movement

The article becomes a living asset.

18. Chief Editor behavior

Chief Editor must guide the user like a project manager.

It should always show:

Current goal
Next best action
Why it matters
Expected impact
Estimated time
Button to execute

Example:

Next best action:
Add voice-search FAQ

Why:
Four high-intent questions were found during research.

Impact:
Improves voice-search readiness and FAQ schema.

Estimated time:
2 minutes

[Generate FAQ]

19. No confusing tabs first

Tabs can exist for expert users, but the default experience must be guided.

Default:

Continue to next step

Expert:

Open Research

Open Blueprint

Open Assets

Open SEO

Open E-E-A-T

Open Voice Search

Open Performance

20. Final experience rule

The user should feel this:

I start with an opportunity.

AGNUS guides me.

AGNUS fills what it can.

I approve, edit, or regenerate.

Every step has a purpose.

Every field can be manual, AI-assisted, or automatic.

I can see what is missing.

I can preview the result.

I know when I am finished.

Final design sentence:

Design AGNUS as an IKEA-style article-building experience where keyword intelligence, semantic search, voice search, E-E-A-T, assets, AI writing, verification, publishing, and growth move together as one guided journey from opportunity to living content asset.

This is where each improvement belongs

1. ARTICLE PIPELINE ★★★★★

This is where the IKEA experience begins.

This page becomes the **mission control**.

Current

Article Pipeline

Should become

Mission

Current Step

Continue

Article Status

Next Best Action

This is where the user starts.

NOT AI Writer.

2. STORY BUILDER ★★★★★

This is where the Strategy happens.

Everything below belongs here.

- Primary Keyword
- Search Intent
- Target Audience
- Article Goal
- Buyer Stage
- Business Goal
- Unique Angle
- Article Blueprint
- Voice Strategy

- E-E-A-T Strategy
- Semantic Strategy

Story Builder becomes the **architect**.

3. RESEARCH PANEL ★★★★★

This becomes Discovery.

This is where all intelligence is gathered.

It should produce

- Competitors
- PAA
- Voice Questions
- Keyword Opportunities
- Search Intent
- Trends
- Research
- Official Sources
- Community Sources
- Statistics

Notice

It produces data.

Nothing gets edited here.

4. AI WRITER ★★★★★

This page should NEVER do research.

Research is already done.

AI Writer should consume.

Meaning

Everything already exists.

AI Writer simply asks

"What should I build?"

This page becomes

BUILD

Inside AI Writer

You already have

Draft

Research

Evidence

Sources

Entities

Excellent.

I would ADD

- Assets
 - Voice Search
 - Semantic
 - E-E-A-T
 - Preview
-

5. KNOWLEDGE SOURCES

This page should NEVER be touched by normal users.

Administrator only.

It feeds

Research

6. SOURCE SCORING

Administrator.

Feeds

Knowledge Sources.

7. KNOWLEDGE DATABASE

Administrator.

Stores

Knowledge.

Feeds

Everything.

8. KNOWLEDGE GRAPH

Administrator.

Creates relationships.

Feeds

Everything.

9. ENTITY MANAGER

Administrator.

Creates entities.

Feeds

AI Writer

Research

Topic Clusters

Marketplace

Academy

10. TOPIC CLUSTERS

This becomes

Content Strategy.

It decides

How every article belongs together.

11. CONTENT ARCHIVE

After Publish.

Everything goes here.

12. CALENDAR

Consumes

Publishing.

Now...

Where does E-E-A-T belong?

This was the missing piece.

Not one page.

It belongs in FOUR places.

Story Builder

Planning

Example

E-E-A-T Strategy
