

Ragionato per 7s

Yes. Each card must have actions. The Article Pipeline is not only for viewing status — it must be where the editor **controls production**.

Below is the full guidance.

---

## FOR CLAUDE DESIGN

### Article Pipeline purpose

The Article Pipeline is the **production control board**.

It answers:

Where is every article, what is blocking it, what should happen next, and who is responsible?

Keep the Kanban layout, but make every card an **intelligent article object**, not a simple task card.

---

### Pipeline columns

Use these columns:

Opportunity  
Idea  
Researching  
Strategy  
Drafting  
AI Review  
Human Review  
SEO / GEO  
Ready  
Scheduled  
Published  
Needs Refresh  
Blocked

The visible board can show only the most active columns, but the full workflow must exist.

---

# Article card structure

Each card should show:

Title  
Primary keyword  
Article type  
Cluster  
Owner  
Priority  
Opportunity score  
SEO score  
Research status  
Readiness %  
Expected traffic  
Expected revenue  
Blocked / Ready status  
Next action

Example:

Best AI Tools for Restaurants

Keyword: best AI tools restaurants  
Type: Buying Guide  
Cluster: Restaurants  
Owner: JD

Opportunity: 8.7  
SEO: 74  
Research: 8 sources  
Readiness: 62%

Expected: +250 visits/mo  
Revenue: €120/mo

Status: Drafting  
Next: Finish draft

---

# Card visual states

Each card must visually show its state.

Normal  
High Priority  
Blocked  
Needs Review  
Ready  
Overdue  
AI Working  
Scheduled  
Published  
Needs Refresh

Examples:

Blocked  
Reason: Missing official pricing source

AI Working  
Chief Editor is checking facts

Ready  
All checks passed

---

## Card actions

Each card must have quick actions.

Visible buttons:

Open  
Next Step  
More

When hovering, show:

Open  
Move  
Assign  
Start AI  
Review  
Schedule  
Archive

The **More** menu should include:

Edit metadata  
Open in Story Builder

Open Research  
Open AI Writer  
Open Review  
Open SEO / GEO  
Open Cluster  
Open Knowledge Graph  
Duplicate  
Refresh research  
Regenerate outline  
Regenerate draft  
Recalculate scores  
Move to blocked  
Archive  
Delete

---

## What happens when clicking each action

### Open

Opens the article detail drawer.

Drawer sections:

Overview  
Status  
Research  
Strategy  
Draft  
SEO / GEO  
Links  
Sources  
History  
Actions

---

### Next Step

This is context-aware.

Examples:

If status is **Idea**:

Next Step = Start Research

If status is **Researching**:

Next Step = Approve Research Brief

If status is **Drafting**:

Next Step = Open AI Writer

If status is **Human Review**:

Next Step = Review Article

If status is **Ready**:

Next Step = Schedule / Publish

---

## Move

Opens a small menu:

Move to:

Idea

Researching

Strategy

Drafting

AI Review

Human Review

SEO / GEO

Ready

Scheduled

Published

Needs Refresh

Blocked

If moving backward, ask:

Why are you moving this back?

[Research incomplete]

[Draft poor quality]

[Source outdated]

[SEO issue]

[Other]

---

## Assign

Assign to:

Jean-Daniel  
Editor  
Researcher  
AI Writer  
SEO Reviewer  
Human Reviewer

---

## Start AI

Starts the correct AI task depending on current stage:

Researching → collect sources  
Strategy → create outline  
Drafting → generate draft  
AI Review → check facts  
SEO / GEO → optimize article  
Needs Refresh → update outdated sections

---

## Refresh Research

Triggers Research Panel.

The card status becomes:

Researching  
AI Working

When complete:

Research complete  
8 sources collected  
1 contradiction found  
Open Research Brief

---

## Regenerate Outline

Sends the article to Story Builder.

Shows:

New outline generated  
Compare with previous outline  
[Keep old]  
[Use new]

[Merge]

---

## Regenerate Draft

Sends to AI Writer.

Must not overwrite automatically.

Show:

Draft regenerated

[Compare versions]

[Replace draft]

[Create new version]

[Cancel]

---

## Recalculate Scores

Recalculates:

Opportunity score

SEO score

GEO score

Readiness

Affiliate value

Internal link health

Cluster strength impact

---

## Move to Blocked

Requires reason:

Missing source

Outdated pricing

No keyword data

Legal risk

Medical claim

Needs human decision

Other

Blocked cards should show a clear red/orange warning.

---

## Schedule

Opens scheduling drawer:

Publish now

Schedule date

Add to queue

Best time suggested by AGNUS

Show:

Recommended: Friday 09:00

Reason: highest newsletter and LinkedIn engagement

---

## Archive

Moves to Content Archive.

Ask confirmation:

Archive this article?

It will leave the active pipeline but remain searchable.

---

## Delete

Should be restricted.

Ask confirmation and require admin permission.

---

## Article detail drawer

When clicking a card, open a drawer, not a full page at first.

Drawer top:

Best AI Tools for Restaurants

Status: Drafting

Priority: High

Readiness: 62%

Owner: JD

Then cards:

Opportunity Score: 8.7  
Expected Traffic: +250/mo  
Expected Revenue: €120/mo  
Research Trust: 94%  
Cluster: Restaurants  
Links Missing: 6

Then tabs:

Overview  
Checklist  
Research  
Sources  
Outline  
Draft  
SEO / GEO  
Relations  
History

---

## Checklist inside drawer

Every article has a checklist:

Research approved  
Outline approved  
Draft generated  
Sources cited  
Internal links added  
Affiliate disclosure added  
SEO title completed  
Meta description completed  
Schema added  
Human review passed  
Scheduled  
Published

This checklist controls readiness score.

---

## Pipeline top bar

Add a summary above the board:

## Pipeline Health

12 in progress

3 blocked

4 ready

€740 estimated monthly revenue

Average production time: 2.6 days

5 AI tasks running

Also add filters:

All

Mine

High priority

Blocked

Needs review

Ready

High revenue

By cluster

By owner

By article type

---

## AI Queue

Add a compact AI Queue section:

AI Queue

Researching: 3

Drafting: 2

Fact-checking: 1

SEO optimizing: 4

Click opens the tasks.

---

## Drag and drop behavior

Dragging cards should be allowed, but controlled.

If user drags **Idea** → **Drafting**, AGNUS should ask:

Research has not been approved.

Do you want to skip research?

[Cancel]  
[Start research instead]  
[Skip with reason]

Never allow unsafe movement silently.

---

## Final Claude Design instruction

Keep the current visual style.  
Do not redesign the whole board.  
Improve the card intelligence, actions, drawer, filters, status logic, and production workflow.

The Article Pipeline should feel like:

A calm, premium AI publishing factory where every article has a state, owner, next action, business value, and audit history.
