

First, I have to say something.

I think you're onto something genuinely premium.

This doesn't look like another AI startup anymore. It already feels closer to **Apple, Linear, Arc Browser, and Notion** than to Product Hunt or G2.

But...

I think we're only at **75%** of what AGNUS can become.

There are a few things that I think would elevate it from "beautiful" to **iconic**.

1. The Marketplace page (9.5/10)

The top section is almost exactly how I imagined it.

The navigation chips...

The breathing space...

The typography...

The filters...

The search...

Excellent.

I honestly wouldn't change much there.

2. The product cards

This is where I think we're missing emotion.

Right now they feel like...

Beautiful ecommerce cards.

I want them to feel like...

Tiny magazine covers.

Instead of

□□□□□□□□□□□□□□□□

(image)

Claude

Reasoning

View

I imagine

□□□□□□□□□□□□□□□□

beautiful dashboard preview

soft lighting

glass

workspace

↓

Claude

"The best AI for deep reasoning."

9.6

2 min overview

View

Notice...

The image tells a story.

Not simply "here's a product."

3. The dark section

This is actually the thing I would redesign.

Not because it isn't beautiful.

Because...

I think we're mixing two different ideas.

The dark block feels like:

A product.

But I actually imagine it as:

A Mission

Imagine opening

AI for Dental Clinics

I don't want a dashboard.

I want an experience.

Maybe...

Large cinematic photography.

A luxurious dental clinic.

Morning light.

Elegant.

Minimal.

Then floating cards.

Like Apple Vision Pro.

Dental Clinic

Increase productivity

+ €2,800

↓

Appointment AI

Voice Receptionist

Patient Reminder

Review System

Course

ROI Calculator

Deploy

The products are no longer inside a table.

They're floating modules.

The user almost feels like

"I am assembling my clinic."

4. Collections should feel alive

Instead of...

Static boxes.

I think each collection should breathe.

Imagine

Hover.

The Voice Receptionist lights up.

Then

Appointment AI connects.

Tiny animated lines.

Nothing flashy.

Just...

alive.

5. The biggest thing missing

This is actually what I noticed immediately.

Everything is rectangular.

Everything.

Cards.

Sections.

Lists.

Rows.

Imagine if AGNUS introduced

depth.

Not more shadows.

Depth.

For example...

When hovering...

One card moves

3px

Another

2px

Background

1px

Image

zooms

2%

Typography stays still.

Now the page feels layered.

Premium.

6. Images

This is where I think we can completely differentiate AGNUS.

Don't use screenshots only.

Mix

real product UI

-

editorial photography

-

3D objects

For example

Claude

Background

beautiful office

glass desk

MacBook

coffee

warm light

Floating

Claude interface

It feels

human.

7. The black collection

Personally...

I wouldn't actually use

pure black.

I'd use

deep graphite.

Like

Apple's Space Black.

Then

a little texture.

Almost invisible.

Paper.

Stone.

Metal.

Something.

Otherwise

large black rectangles can feel visually heavy.

8. I would make Collections the hero

This is probably the biggest thing.

Right now

Marketplace

↓

Products

↓

Collections

I would invert it.

Marketplace

↓

Collections

↓

Products

Why?

Because

people don't wake up saying

"I need software."

They wake up saying

"I own a dental clinic."

"I own a law firm."

"I run a hotel."

"I'm a YouTuber."

"I'm an architect."

Collections solve identities.

Products solve tasks.
That's a huge psychological difference.

Imagine the first thing you see

Healthcare.

Now

Everything

changes.

Marketplace.

Articles.

Courses.

Agents.

Reviews.

Comparisons.

Prompts.

Templates.

Everything reorganizes around

Healthcare.

That's magical.

My favorite idea

This came to me while looking at your design.

I would create something called

AGNUS Collections

Not bundles.

Collections.

Think of them as **digital operating systems for an industry**.

For example:

AGNUS Collection

Dental Clinics

↓

9 AI Products

4 Automations

2 Agents

18 Prompt Packs

1 Course

Case Studies

ROI Calculator

Implementation Roadmap

Community

When someone buys it, they don't feel like they've bought software.

They feel like they've acquired **the complete AI transformation blueprint for their business.**

My overall rating

Honestly?

9.7/10.

Not because it isn't beautiful.

Because I think you're building something that deserves to become **timeless**.

The remaining 0.3 isn't about prettier UI—it's about giving the interface a stronger sense of **story, movement, and identity**.

When someone enters AGNUS, I want every section to answer a silent question:

"What world do I want to enter today?"

Right now, you've built an excellent marketplace.

I think the next evolution is to make it feel like **a collection of worlds**, where each industry, each learning path, and each AI solution has its own atmosphere while still belonging to the same elegant AGNUS universe. That, to me, is what turns a beautiful interface into a memorable product.
