

Absolutely. Since AGNUS is becoming an enterprise platform, Claude and Codex should receive **different specifications**. Claude should think like a **UX/Product Designer**, while Codex should think like a **Senior Backend Architect**.

CLAUDE DESIGN GUIDELINES

Page: Source Scoring

Mission

Design Source Scoring as the **Explainable Trust Center** of AGNUS.

The administrator should immediately understand:

- Why AGNUS trusts a source
- How trust is calculated
- How trust changes
- How trust affects the rest of the platform

The page should feel like an enterprise AI control center, not merely a settings page.

Section 1

Trust Philosophy

Purpose

Explain the philosophy before showing numbers.

Example

AGNUS never believes information.

It verifies it.

Every source is continuously evaluated using multiple weighted factors.

Trust is dynamic.

Trust changes over time.

No source is permanently trusted.
