

1. AGNUS Brain ★★★★★ (Excellent)

This page is becoming exactly what it should be.

I especially like:

- Evidence before recommendations
- Confidence %
- Revenue protection
- Impact
- Time estimate
- Sources read

That makes the AI explain itself.

What I would improve

Add reasoning layers

Right now it says

Google Trends ↑42%

But I want the user to be able to click

Why?

and open

Evidence

Google Trends

Trend:

AI Agents for SMB

+42%

Last 30 days

Confidence:

High

Collected:

2 hours ago

Every evidence pill should expand.

That makes AGNUS trustworthy.

Add Confidence Explanation

Instead of

94%

clicking it should show

Confidence Score

Official Sources

40%

Search Demand

25%

Competition Analysis

15%

Internal Analytics

10%

Historical Performance

10%

That immediately explains WHY.

2. Knowledge Graph

This is probably my favorite page.

The idea is excellent.

However...

today it is a static chain.

Real graphs are alive.

I would evolve it into

OpenAI

with clickable nodes.

Each node should display

Articles

Revenue

Traffic

Internal Links

Related Entities

Source

Now it becomes your CMS brain.

3. Automatic Impact Detection

Excellent.

This is exactly what professional enterprise systems do.

I would only add

Priority

Critical

High

Medium

Low

because not every page matters equally.

Example

Homepage

★★★★★

AI Comparison

★★★★☆

Old News

★

4. Strategic Roadmap

This is one of the strongest features.

It doesn't say

Write article.

It says

Why.

Excellent.

One improvement.

I would add

Expected Traffic

+250 visits/month

Expected Revenue

€120/month

Authority Gain

+7%

Difficulty

Easy

Then people understand WHY.

5. Create Article

Very strong.

But...

This modal is becoming crowded.

Instead of showing everything immediately...

I would make it progressive.

Step 1

Article Type

Keyword

↓

Step 2

Audience

Goal

Tone

↓

Step 3

Cluster

Connected Assets

Publishing

This reduces cognitive load enormously.

6. AI Writer

Very, very good.

I especially like

Research

SEO

Graph

Relations

Competitors

Publish

This is becoming a true editorial workstation.

But...

I would add one tab.

Sources

Inside

OpenAI Blog

Google Trends

Search Console

Reuters

PartnerStack

GitHub

Official Docs

Every paragraph should know where it came from.

7. Publish Panel

This is extremely strong.

Almost production ready.

I would only add

Risk Analysis

Duplicate content

Legal

Medical claims

Outdated pricing

AI detection

Missing citations

before Publish.

8. Knowledge Sources

This page is very close.

One thing missing.

Separate

Knowledge Groups

from

Individual Sources.

Like

Official Companies

↓

OpenAI

Anthropic

Google

Microsoft

Currently it feels a little mixed.

9. Official Companies

Excellent.

But...

I would add

Last Updated

Source Type

RSS

API

HTML

Webhook

so developers immediately know HOW data arrives.

10. Source Settings

Excellent.

Really.

Only missing

Authentication

OAuth

API Key

Bearer

Webhook Secret

Because eventually users will configure APIs.

11. Source Scoring

The architecture is correct.

However...

The presentation can become much stronger.

Instead of

100,95,100,90,95

show

Overall
97

Trust
100

Freshness
95

Relevance
100

Signal
90

Noise
95

Much easier to understand.

Also...

I would explain

How was this calculated?

and show

Formula

40%

20%

20%

15%

5%

People trust transparent scoring.

One thing I think is still missing from the entire platform

This is actually the biggest thing.

You have

Knowledge

↓

Graph

↓

Writer

↓

Brain

But you're missing

AGNUS Memory

A persistent memory.

Example

OpenAI

First detected

Jan 2025

Articles

42

Reviews

8

Comparisons

15

Revenue

€3,400

Average ranking

#4

Traffic trend

↑

Entity health

97%

Not just today's data.

Lifetime memory.

This becomes your competitive advantage.

Another thing

I also think you're missing

Intelligence Timeline

Imagine

Yesterday

↓

OpenAI changed pricing

↓

Graph updated

↓

12 articles flagged

↓

2 articles rewritten

↓

Published

↓

Traffic recovered

Like Git history.

This is incredibly useful.

Overall score

Area	Score
Dashboard	10/10
Brain	9.8/10

Knowledge Sources	9.7/10
Knowledge Graph	9.8/10
Source Scoring	9.3/10
Writer	9.8/10
Publishing	9.9/10
Article Creation	9.5/10

Overall architecture: 9.8/10

The remaining work isn't about adding random features anymore. It's about making the platform feel like a **living intelligence system**. The biggest opportunities I see are:

1. **Persistent Memory** (historical knowledge and learning over time).
2. **Interactive Knowledge Graph** (clickable, explorable relationships instead of a static visualization).
3. **Evidence Drill-down** (every recommendation and confidence score should be fully explainable).
4. **Developer-grade Source Configuration** (authentication methods, ingestion type, and synchronization details).
5. **Intelligence Timeline** (a chronological history of what the Brain detected, why it acted, and what changed as a result).

If those are implemented well, AGNUS will feel less like a content management system and more like an AI operating system for knowledge and publishing.
