

Below is the exact guidance to pass forward.

For Claude Design

Goal: Topic Clusters must not feel like a list of articles. It must feel like a **living knowledge ecosystem**.

Keep the current overview

Keep the existing cluster cards. They are good for fast scanning.

Each card should show:

- Cluster name
- Status: Early / Growing / Strong
- Pillar article
- Supporting articles
- Missing articles
- Cluster strength %
- Articles completed
- Links missing
- Revenue potential
- Authority

Add cluster detail view

When clicking a cluster card, open a full cluster detail page or drawer.

Tabs:

- Overview
- Map
- Articles
- Links
- Gaps
- Roadmap
- Settings

Map tab

This is the missing visual piece.

Show a relationship graph:

Pillar Article

↓

Subtopics

Supporting Articles

Products / Reviews / Comparisons / Academy / Marketplace

Nodes should be clickable.

Use colors/status:

Published

Draft

Missing

Needs update

High value

Weak link

Add relationship controls

The user must be able to:

Connect nodes

Disconnect nodes

Merge clusters

Split cluster

Create subcluster

Promote article to pillar

Demote pillar

Add missing article

Move article to another cluster

Add AI suggestions

On the right side, add:

AGNUS Suggestions

Missing article: AI Agent Security

Missing comparison: Claude vs GPT for agents

Weak link: Pillar does not link to Sales Agents

Cluster gap: No marketplace page

Recommended next action: Create "AI Agent Security Guide"

Buttons:

Create

Add to roadmap

Ignore

Add cluster health breakdown

Instead of only one strength bar, show:

Cluster Strength: 58%

Semantic Coverage: 72%

Search Intent Coverage: 61%

Internal Link Health: 84%

Commercial Coverage: 55%

Freshness: 90%

Authority Fit: 76%

Final design principle

Topic Clusters should answer:

“How strong is this knowledge territory, what is missing, and how do we dominate it?”
